

## Loaded ULD Storage Racks

The ULD Storage Racks (2 High) are two units that are bolted one on top of the other, allowing storage of fully loaded LD3 Units or fully loaded lower deck PMCs secured on a slave deck in the upper and lower position.

Frame construction is of 4"x4"x $\frac{3}{8}$ " steel angle welded members throughout, with the cross supports that the ULDs rest upon using 4"x4"x $\frac{3}{16}$ " steel tubing. The base of the storage rack has eight  $\frac{7}{8}$ " clearance holes along the top and the bottom of the frame to allow either  $\frac{3}{4}$ " diameter anchor bolts to secure the rack to the concrete base or  $\frac{3}{4}$ " diameter nuts and bolts to secure the upper rack to the lower rack. Anchor bolts and mounting hardware are provided.

Technical Specifications	
Capacity	15,000 pounds each level
Outer Dimensions	144" x 108" x 90"
Inner Dimensions	136" x 103" x 90"
