

## Centering Racks

Maxson Aviation Centering Racks are designed to facilitate the process of creating pallet stacks for conveyance on board airplanes and trucks. The flared uprights allow for the forklift operator to load multiple pallets at once and the tapered design centers the pallets, creating a stack that is ready for strapping and transfer. They can also be used for storage.

The racks are designed to hold up to 50 pallets and can be manufactured to accommodate any size of ULD including PMC, PAG, FNA, PLA, etc. Great for storage also!

Technical Specifications	
Exterior Dimensions	146"x118"x72"
Interior Dimensions	126"x97.5"x63"
Weight Capacity	15,000 pounds
