

The MAXSON AVIATION Static Rack creates elevated storage height for transferring loaded ULDs to and from dollies, transporters and slave decks. It offers the following features:

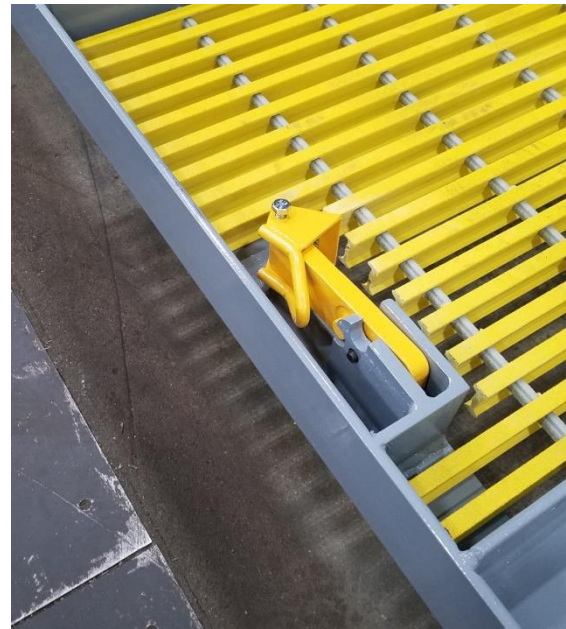

- **Reliable Design**  
The racks are a dependable, serviceable solution for staging inbound or outbound Unit Load Devices within a warehouse, ground support equipment ramp or planeside.
- **Rugged Construction**  
The heavy framed units employ thick walled, galvanized rollers and height adjustable legs (18" to 23") to suit operational requirements.
- **Safe and Secure**  
Unique safety and security features include high visibility, non-slip catwalk grating and vertical restraint locks which prevent pallets from overriding the racks.

*MAXSON AVIATION Static Rack (End Load Version)*

*Heavy Duty Framing*

*Non Slip Cat Walk and Vertical Restraint Stop*
