

Caster Deck Systems

Maxson designs, manufactures and installs integrated caster deck systems that are customized to allow our customers maximum operational efficiency by reducing manual handling of ULD traffic.

These systems are complemented by scissor lifts and are equipped with 10 foot and 20 foot cargo scales built in with caster deck table tops.

The decks can be engineered to accommodate any operational elevation requirement from a height of 5 inches to 22 inches.

The deck is designed to utilize the new Mobra caster which is a drop in model that simplifies installation and replacement.
